PHASE 1 - Encryption-Ready
Programming for the transition to encryption will change your radio controls.

Danger! Encrypted comms will not be heard until transition.

**Also Important!** Your radio must be reprogrammed to hear and transmit encrypted calls.

PHASE 2 - Region Transitions, Encryption Enabled - planned Q1 '26
Dispatch or your command staff will notify you when to enable encryption.
Encryption-keyed radios will playback any authorized audio regardless of the SEC setting.
Select an encrypted talkgroup (name has ^ symbol) to toggle the SEC button.
If encryption is not available, your radio will transmit in the clear regardless of the SEC setting.

Press **SEC** → **BEEP** → ⊘ displayed indicates encrypted transmission for encryption-enabled talkgroups

^ Caret Symbol = Encrypted Talkgroup

PTT

**Clear = beepbeepbeep-BEEP
Encrypted = beepbeepbeep**

PHASE 3 - Radios are "Strapped"
Post-2nd programming, radios will be strapped to only encrypted or only clear communications,
per-talkgroup, no toggling necessary.
